

Havill & Co.

Track every engagement from first tour to a signed lease, run side-by-side proposal analysis, draft proposals with AI, and give each client a private, live portal of their search. Here's everything you need to get going.

1 Sign in

- **Go to havill-vantage.netlify.app** and sign in with your Havill email.
- **Click “Deal flow” in the left sidebar.** Same login runs the market Cockpit, so it's all one app.

2 The pipeline

Your deals live in six stages: Needs & Research > Touring > Evaluating Options > Proposals > Negotiation > Executed.

- **+ New deal** starts one. Open any deal and use the Stage dropdown to move it along.
- **Closed / dead deals** tuck into a collapsible list under the board — click one to reopen it.

3 Inside a deal

- **Buildings** add the properties in play for the client.
- **Tour schedule** add visits — building, date & time, status, notes.
- **Proposals & rounds** add a proposal per building, then log each round (your offer or the landlord's counter) with the economics: rent structure, base rent, opex, escalations, free rent, TI, and term.
- **Compare** shows every proposal side-by-side, normalized to one net-effective rent — so a full-service deal and an NNN deal compare apples-to-apples.

4 Draft proposals with AI

- **On a proposal, click Draft with AI.** Pick a template (paste one, or upload your Word .docx).
- **Type — or tap the mic and talk — the deal points.** Claude writes the proposal and fills in the numbers.
- **It appears as a draft round.** Click “review” to read it, edit the wording and terms, then “Mark as final.”

5 Files & the lease abstract

- **Attach files** (proposal PDFs, Word docs) to any proposal.
- **Lease abstract** when the deal signs, fill in the executed lease's key terms — it auto-fills from your finalized proposal. This becomes your client's permanent reference (premises, term, rent, options, deposit, and critical dates).

6 Share with your client

- **Click “Share with client”** set a passcode and you get a private link. Send the link and the passcode separately (text + email).
- **Control what they see** with the Shown / Hidden toggles on proposals, files, tours, and the lease abstract. Drafts never show.
- **They get a clean, read-only portal** (no login), can Download a PDF leave-behind, and you'll see “Client opened 3x · last 2h ago” right on the deal.

A few good habits

- Mark a proposal “Shown” only when it's ready.
- Keep rounds current — the compare always reflects the latest.
- Review and finalize AI drafts before sharing.
